

Installations, Tips and Tricks

(Leaflet E011 – Updated 28.08.2008)

Installation guide for mounting the frame cap

Thank you to have chosen our products.

The assembly of our frame caps is very simple:

Important

*Please **don't** grease the O-ring!*

With the help of a 5mm allen key please tighten the cap lightly and push it in the frame opening. Now tighten the cap completely with the allen key to stretch the O-ring and give the cap a tightly fixation. For this it can be necessary to hold the cap against turning during mounting.

Additional information for DUCATI 1098

Each set includes a separate mounting kit!

- The big caps must be dismounted and completed with the aluminium spacer between o-ring and cap. Therefore please use the attached longer screws.

- To mount the smaller caps (20 -and 30mm) it can be necessary to use the attached o-rings due to different layers of the painted frame (hole diameter).

Attention!

Please check the cap for a tightly fixation after some miles of riding.

From time to time please repeat this procedure.

Have fun and a successful installation, yours MPL-Team!!!
